

InnerForge

AI That Knows You, Then Challenges You — MERN Web App

■ LOCKED IDEA — MERN Stack Web Project

InnerForge combines MirrorMind (AI-powered private journal that builds your psychological profile) and ArgumentLab (AI idea stress-tester) into one unified platform. The magic: the stress-tester uses YOUR detected blind spots from your journal to attack your ideas personally — not generically. It also includes a social Arena for live debates and an Evolution tracker to measure your growth.

The Core Algorithm

You write freely → AI learns your patterns → AI stress-tests your beliefs using YOUR blind spots → You grow

The 4 Modules

Module 1 — The Mirror

MirrorMind

Daily free writing journal. AI analyzes each entry for emotions, themes, and cognitive biases. Builds your psychological profile over time. Detects blind spots: 'You abandon goals every 3 weeks.' Generates a Future Self Letter from your patterns.

Module 2 — The Forge

ArgumentLab

Paste any idea, belief, or plan. AI attacks it from 10 angles using your detected blind spots first, then logical, financial, ethical, emotional, and contrarian angles. Steel man mode builds the strongest version of your idea. Gives an overall idea strength score.

Module 3 — The Arena

Social Layer

Invite a friend to challenge your idea live (Socket.io). Anonymous community submits ideas for public stress-testing. Upvote the most interesting arguments. Weekly 'Idea of the Week' voted by community.

Module 4 — The Evolution

Growth Tracker

Timeline of your psychological evolution. 'Three months ago you feared failure, now you embrace it.' Bias reduction score — are you becoming less biased over time? Decision quality tracker.

Tech Stack

Layer	Technology
Frontend	React + Vite + Tailwind CSS
Rich Text Editor	TipTap
State Management	Zustand
Charts & Viz	Recharts + D3.js
Backend	Node.js + Express
Database	MongoDB Atlas + Mongoose
Real-time	Socket.io (live Arena debates)
Auth	JWT + Google OAuth

AI Engine	Claude API (Anthropic)
Deployment	Vercel (frontend) + Render (backend)

Key MongoDB Schemas

Schema	Key Fields
JournalEntry	user, content, allInsights { emotions[], themes[], biasesDetected[], keyPhrases[] }, createdAt
PsychProfile	user, coreValues[], topBiases [{ name, strength 0-100, firstDetected, frequency }], recurringFears[], decisionM
Idea (Forge)	user, title, content, attacks [{ angle, argument, severity, isPersonalized }], steelMan, overallScore 0-100, isP

Key Visualizations (The WOW)

Visual	Library	What It Shows
Bias Radar Chart	Recharts	Your top cognitive biases as a spider web
Emotion Timeline	Recharts	How your emotions shifted over months
Argument Tree	D3.js	Branching attack/defense tree for ideas
Psych Evolution	Recharts	Are your blind spots shrinking over time?
Theme Word Cloud	d3-cloud	Most recurring themes in your writing

10-Week Build Roadmap

Week	Task
Week 1	Auth + Rich text journal editor (TipTap) + basic UI
Week 2	AI journal analysis per entry (Claude API) + insights display
Week 3	Psychological profile builder from all entries
Week 4	Profile dashboard — radar chart, emotion timeline (Recharts)
Week 5	Idea submission + AI stress tester (generic 10-angle attacks)
Week 6	Personalized attacks using user's psych profile blind spots
Week 7	D3.js argument tree visualization + steel man display
Week 8	Arena — public ideas + live debate with Socket.io
Week 9	Evolution tracking + bias reduction scores + growth charts
Week 10	Polish UI + Deploy (Vercel + Render) + README

Interview Answer

"I built InnerForge — an AI-powered self-awareness platform. It combines a private journal analyzed by Claude API to build your psychological profile over time, with an idea stress-tester that attacks your beliefs using your own detected blind spots. The personalization is the key — the AI doesn't give generic feedback, it challenges you based on patterns it found in your own writing. Built on MERN stack with D3.js visualizations and Socket.io for live debates."

Why This Gets You 12 LPA+

- Nobody builds this — not a clone of anything, completely original concept
- AI personalization layer shows advanced prompt engineering, not just basic API calls
- D3.js visualizations demonstrate frontend depth beyond typical React CRUD apps
- Socket.io live Arena shows real-time architecture understanding
- Interviewers will want to USE it — memorable demos win interviews
- Combines psychology + AI + data viz — signals product thinking, not just coding
